## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 11-13, 15-23 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Pat. No. 4,506,407 to Downey.

Downey '407 teaches Applicant's claim limitations including : a "sliding rail" - , "at least one upper chamber" – including left-most portions of 11 as shown in Fig 2, "at least one lower chamber" – including portions to the right of 71, a "power supply" – including 71, a "displaceable slide member" – including 26, a "holding mechanism" – including 41, a "retaining mechanism" – including 42,43.

As regards claim 12, as shown in Fig 2, conductor lines 72,73, include parallel portions adjacent 71 that read on broad limitation.

As regards claim 13, engaging portions of 42,43 read on broad limitation for "spring loaded contact pins" where limitation of "cooperate with" doesn't define any particular structure that can be relied upon to patentably distinguish over the functional relationship established between power of the conductor lines and movement of 42,43. The law of anticipation requires that a distinction be made between the invention described or taught and the invention claimed. It does not require that the reference

Art Unit: 3673

"teach" what the subject patent teaches. Assuming that a reference is properly "prior art," it is only necessary that the claims under consideration "read on" something disclosed in the reference, i.e., all limitations of the claim are found in the reference, or "fully met" by it. *Kalman v. Kimberly-Clark Corp.*, 218 USPQ 789.

As regards claim 16, part 66 reads on "stopper" where again limitation of "cooperating with" does not define any particular structure that can be relied upon to patentably distinguish from the functional relationship of the prior art elements.

As regards claim 19, one of ordinary skill in the art would recognize that the functional holding force of 66 is inherently stronger than the spring arrangement provided by 38.

### ***Allowable Subject Matter***

3. Claim 14 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Pat. No. 5,072,973 to Gudgel.
